Follow the instructions in your Autocad program to load a model from the files of the CD. At the main menu, select "Load" and the model will be loaded. Technical information Autocad has a flexible and scalable architecture that allows you to load your files in AutoCAD, try different commands or even manipulate your drawing for better illustration. The scope of the command is to process a 3D model in a 2D diagram. The software provides access to a set of objects that will be automatically displayed in your drawing. No predefined surface or projection is required. It does not require a file that already has an axis system for the specification of the projection. You can even perform "reverse drafting" on your model in AutoCAD, which means that you convert a 2D drawing into a 3D model. Pituitary adenomas are the third most common intracranial neoplasm and are often characterized by a high proliferative index (Ki67). We, and others, have used Ki67-immunohistochemistry to establish a prognostic association between its value, and patient survival. These data suggest that a fraction of pituitary tumors are biologically and clinically heterogeneous with a substantial fraction of tumors classified as dormant. There is a need for accurate methods to monitor response to therapy. The overall objective of this project is to develop an image analysis technique capable of measuring pituitary tumor volume on high resolution MRI images. This technique will allow us to 1) monitor the effects of radiation therapy; 2) test the efficacy of novel targeted therapies such as radiopharmaceuticals; and 3) measure tumor change over time. The first component of the study, to develop and validate a high resolution MRI image analysis technique, is complete and has been submitted for publication. The second component of the study, to investigate the growth and regulation of pituitary tumors, is in the process of initiation. We hypothesize that a combination of human growth hormone and estrogen will alter the growth of endopituitary tumors, and that an in vitro
